

The following lectures from the [Price Action Masterclass](#) will further explain how to look at price:

[Simple Is Beautiful](#) — We want efficient simplicity in our technical analysis. This lecture will explain why a simple price action system allows you to quickly find excellent trade candidates as well as easily measure performance. The last thing you want is “indicator soup” from a cluster of complex and useless technical methods.

[Technicals Vs Fundamentals](#) — We’ll explain why this is a stupid debate. At a high enough level, both camps actually execute a similar process. And as you know, with the MO Trifecta, we combine the best from both approaches.

[Possibilities, Not Predictions](#) — Trading is a probabilistic endeavor. Any form of analysis, including technical, will not be 100% accurate. Expecting any type of certainty sets you up for failure. This lecture will explain how to move from certainty to managed uncertainty.

Enjoy!

Your Macro Operator,

Alex
