

We've got some more lectures from the [Price Action Masterclass](#) to explore today:

[Pattern Failure](#) — Chart patterns can morph and fizzle into unintelligible chicken scratch. Understanding the reason for pattern failure will help set expectations. It'll also steer us away from market conditions that make price pattern trading more likely to fail.

[Timeframes](#) — A discussion on which timeframes to focus on and why. Higher timeframes offer the best combination of stability and efficiency. Also discover how to use multi-timeframe analysis to uncover “nested” patterns.

[Unique Markets](#) — Each asset class behaves uniquely because of the different market players involved. Fixed income will never trade like oil. And a hot tech stock will never trade like an equity index. Awareness of these market nuances will help you tweak your price action analysis to better fit a target market.

Your Macro Operator,

Alex
